

# AirDrops.Click

## A D C

*Decentralized*

*Smart*

*Dapp*

*Daily Airdrops*

*Arbitrage*

*Tron Blockchain*

## *What is Airdrops.Click*

AirDrops.Click is a Decentralized Dapp in the Tron Blockchain.

The autonomous AirDrops.Click SmartContract distributes (airdrops) a fixed amount of ADC Tokens (ADC) and a dynamic amount of Tron Tokens (TRX) to dapp users, every day.

On the dapp website <https://airdrops.click> there is a countdown timer, every time that countdown hit 0, the SmartContract will distribute an amount of ADC and TRX to all airdrop's participants.

## *What is ADC*

ADC is the Official Token of Airdrops.click dapp.

ADC is a real TRC10 token, it can be stored in every tron wallet, it can be sold and bought on decentralized exchanges, it can be transferred to other tron wallets.

## *ADC Airdrops*

By participating to ADC airdrops, you will be able to receive ADC in your wallet. Participating in a ADC airdrop is easy, just put Trx on the airdrop, and when the countdown hit 0 you will receive an amount of ADC in your wallet (you will need to click “Withdraw Profits” button).

The SmartContract release 10000 (10k) ADC on every airdrop, distributed among all participants of each airdrop.

How many ADC you get in a Airdrop:  
 $10000 \text{ ADC} / \text{Total Trx in Airdrop} * \text{Your Trx in Airdrop}$

## *Trx Airdrops*

By participating to Trx airdrops, you will be able to receive Trx in your wallet. Participating in a Trx airdrop is easy, just put ADC on the airdrop, and when the countdown hit 0 you will receive an amount of Trx in your wallet (you will need to click “Withdraw Profits” button).

The SmartContract release 33% of its Trx Balance on every airdrop, distributed among all participants of each airdrop.

How many Trx you get in a Airdrop:

$Trx\ Pot\ (33\% \text{ of contract balance}) / Total\ ADC\ in\ Airdrop * Your\ ADC\ in\ Airdrop$

## *ADC Airdrops Price*

The price (in Trx) of ADC tokens received or burned in airdrops is fully discovered by the supply and demand.

When you participate in ADC Airdrop, the Supply is always 10000 ADC, while the demand is the total amount of Trx put by all participants for that Airdrop.

In ADC Airdrops, the price formula (ADC/Trx) is the following:

$Total\ Trx\ in\ Airdrop / 10000$

The more Trx (participants) in the Airdrop, the higher ADC price will be.

When you participate in Trx Airdrop, the Supply (of Trx) is dynamic (33% of contract balance in that moment), and the Demand (ADC) is the total amount of ADC put by all participants for that Airdrop.

In Trx Airdrops, the price formula (ADC/Trx) is the following:

$Trx\ Pot / Total\ ADC\ in\ Airdrop$

The more ADC (participants) in the Airdrop, the lower ADC price will be.

## *Profits Opportunities in Airdrops*

In order to make a profit, you need to get ADC at low price from ADC Airdrops, and use them on Trx Airdrops.

Keep an eye on each airdrop everyday, the best strategy is to avoid crowded airdrops.

## *Arbitrage Opportunities*

Since ADC is a real TRC10 Token, you can buy and sell it in various decentralized Tron Exchanges.

There will be a difference between the price of ADC in exchanges, and the price of ADC in airdrops.

If the ADC is cheaper in the exchanges, you can buy it on exchanges and use it in trx airdrops, making a profit that way.

If the ADC is expensive in the exchanges, you can get it on ADC airdrops and sell it in the exchanges, making a profit that way.

You can as well trade it exclusively on exchanges, or just use it exclusively on Airdrops.

Remember, every time a ADC is put in a Trx Airdrop, it is burned, thus the circulating supply is always limited.

## *Referral Links*

You can give your referral link (you can find it on <https://airdrops.click>) to your friends, and you will earn 5% of all the ADC and Trx they put on Airdrops (at NO cost to them!), forever.
